

## Table of contents

### Chapter 1 contents

<b>Key points of the Water Plan Update 2003 .....</b>	<b>1-2</b>
<b>Overview of the Water Plan Update 2003 .....</b>	<b>1-3</b>
Balanced portfolio of water management strategies to meet needs .....	1-3
Regional integrated resources approaches .....	1-5
State's role including improved data and analytical tools .....	1-7
Methodology .....	1-8
Funding .....	1-11
Where do Californians agree and where are there disagreements? .....	1-12
Key recommendations .....	1-12

### Chapter 2 contents

<b>California water today .....</b>	<b>2-1</b>
California – setting .....	2-1
Existing statewide water uses and supplies .....	2-2
Roles in water management. ....	2-3
Understanding how water is allocated, used and regulated in California.....	2-5
Constitutional, statutory and common law framework for water uses.....	2-6
Institutional tools for managing resources .....	2-10
Water supply reliability management.....	2-10
Challenges facing California water resources and management .....	2-11
Population growth .....	2-12
Less water from the Colorado River .....	2-12
Contamination of surface and groundwater is limiting supplies .....	2-12
Climate change .....	2-13
Reliability of irrigation water for food productivity .....	2-13
Lack of funding to implement management strategies .....	2-13
Degradation of the ecosystem .....	2-13
Constraints on inter-regional deliveries .....	2-15
Groundwater overdraft .....	2-15
People without piped and safe drinking water .....	2-15
Inadequate assessment of tribal water needs .....	2-16

## Table of contents

Insufficient state and federal funding for CALFED Stage 1 implementation .....	2-17
Competing and conflicting jurisdictional roles and responsibilities .....	2-17
Water pricing .....	2-17
New surface storage .....	2-18
Regional challenges .....	2-18
Today's responses to challenges .....	2-18
Some regulations governing water related resources management .....	2-19

AC Review Draft August 29, 2003. This is a draft for discussion purposes only. It has not been approved by DWR or Advisory Committee

## Chapter 3 contents

<b>Planning for an uncertain future .....</b>	<b>3-1</b>
The future of California agriculture and food .....	3-2
Water quality concerns .....	3-2
Hydrologic events .....	3-4
Frequency and intensity of floods .....	3-4
<b>Flood and floodplain management .....</b>	<b>3-5</b>
<b>Recommendations .....</b>	<b>3-6</b>
Extreme (single-year) and prolonged (multiyear) drought events .....	3-7
<b>Drought contingency planning .....</b>	<b>3-8</b>
<b>Recommendations .....</b>	<b>3-9</b>
Vulnerability to catastrophic events .....	3-11
Earthquakes .....	3-12
<b>Floods .....</b>	<b>3-12</b>
Vandalism .....	3-13
Terrorist acts .....	3-13
Other vulnerabilities .....	3-14
Recommendations .....	3-14
Global climate change .....	3-15
Snowpack changes .....	3-16
Hydrologic patterns .....	3-16
Sea level rise .....	3-16
Rainfall intensity .....	3-17
Urban and agricultural demand .....	3-17
Aquatic life .....	3-17
Other impacts .....	3-17
Adaptations and responses .....	3-18
Recommendations .....	3-18
Future scenarios and responses .....	3-20
Key Factors .....	3-21
Scenario 1: Current Trends .....	3-22

## Table of contents

<b>What does current trend mean? .....</b>	<b>3-22</b>
<b>Considerations .....</b>	<b>3-25</b>
Scenario 2: High Efficiency/Pie in the Sky .....	3-25
<b>What does high efficiency mean? .....</b>	<b>3-26</b>
<b>Considerations .....</b>	<b>3-27</b>
Scenario 3: Resource intensive .....	3-28
<b>What does resource intensive mean? .....</b>	<b>28</b>
<b>Considerations .....</b>	<b>30</b>
Scenario 4: Food Production .....	31
Next steps for using analytical tools including short-term and long-term work plan .....	31

## Chapter 4 contents

<b>Regional integrated resource planning .....</b>	<b>4-1</b>
Current regional integrated resource planning in California .....	4-2
Types of regional integrated resource planning .....	4-4
Preparing integrated resource plans for sustainable development.....	4-4
Issues for implementing regional integrated resource planning .....	4-8
Recommendations to improve regional integrated resource planning .....	4-9
North Coast Hydrologic Region .....	4-11
San Francisco Bay Hydrologic Region .....	4-17
Central Coast Hydrologic Region .....	4-23
South Coast Hydrologic Region .....	4-25
Sacramento River Hydrologic Region .....	4-33
San Joaquin River Hydrologic Region .....	4-41
Tulare Lake Hydrologic Region .....	4-49
North Lahontan Hydrologic Region .....	4-57
South Lahontan Hydrologic Region .....	4-63
Colorado River Hydrologic Region .....	4-69
Mountain Counties Region .....	4-71
The Delta Region .....	4-73

## Chapter 5 contents

<b>Resource management strategies .....</b>	<b>5-1</b>
California's resource management tool kit .....	5-1
Agricultural water use efficiency .....	5-5
Aquifer remediation .....	5-19
Conjunctive management .....	5-21
Conveyance .....	5-31
Desalination .....	5-39
Drinking water treatment and distribution .....	5-41
Economic incentives policy .....	5-49
Ecosystem restoration .....	5-57
Floodplain management .....	5-59
Matching water quality to use .....	5-63
Pollution prevention .....	5-71
Precipitation enhancement .....	5-79
Recharge areas .....	5-83
Recycled municipal water .....	5-87
System Reoperation .....	5-95
CALFED surface storage .....	5-97
Surface storage - regional/local .....	5-113
Urban land use management .....	5-119
Urban runoff management .....	5-125
Urban water use efficiency .....	5-133
Water dependent recreation .....	5-143
Watershed management .....	5-147
Water transfers .....	5-153
Working lands management .....	5-167
Other research and development .....	5-169

## Chapter 6 contents

<b>The state role and financing the plan .....</b>	<b>6-1</b>
The state role .....	6-1
Recommendations for strengthening the state role .....	6-3
Principles for providing state assistance and investment .....	6-5
Financing the plan .....	6-8
Funding for Update 2003 .....	

## Table of contents

strategies and recommendations .....	6-8
<b>Funding strategies .....</b>	<b>6-8</b>
